

182 – Duplicate Emails

PLATFORM

Platform: LeetCode

DIFFICULTY

EASY

DATE

Solved: June 3, 2026

Problem

Find all email addresses that appear more than once in the `Person` table.

Execution Order

- Read data from `Person`
- Group rows by `email`
- Count rows in each group
- Keep only groups with count > 1
- Return the email values

Concepts Used

1. GROUP BY

Groups rows having the same email together.

2. COUNT(*)

Counts the number of rows in each group.

3. HAVING

Filters groups after aggregation.

```
HAVING COUNT(*) > 1
```

Keeps only groups whose count is greater than 1.

Key Interview Note

To find duplicate values in any column:

```
SELECT column_name
FROM table_name
GROUP BY column_name
HAVING COUNT(*) > 1;
```

Pattern to remember:

GROUP BY + HAVING COUNT(*) > 1

182. Duplicate Emails Solved ✓

Easy Topics Companies

SQL Schema Pandas Schema

Table: `Person`

Column Name	Type
<code>id</code>	<code>int</code>
<code>email</code>	<code>varchar</code>

`id` is the primary key (column with unique values) for this table. Each row of this table contains an email. The emails will not contain uppercase letters.

Write a solution to report all the duplicate emails. Note that it's guaranteed that the email field is not NULL.

Return the result table in any order.

The result format is in the following example.

Example 1:

Input:

Person table:

<code>id</code>	<code>email</code>
1	a@b.com
2	c@d.com
3	a@b.com

Output:

<code>Email</code>
a@b.com
